Instructions:

The installer you downloaded comes with three folders:

Mac
STEAM
Windows

• OSX users: Open the Mac folder to find the installer .pkg to run.

• PC users: Open the Windows folder to find the installer .exe to run.

Please run the installer directly from within the folder and do not change the folder hierarchy. The installers rely on the folder hierarchy presented in the download to function properly. It is not necessary to open the STEAM folder.

NOTE: Please do NOT try to manually install the STEAM folder.

The installer automatically checks the Spectrasonics folder on your startup drive to determine the STEAM folder location. The update will then be installed to the STEAM folder.
